7.1 Wear-Leveling

Terabit 1.8'' Micro SATA SSD support both static and dynamic wear-leveling technology. These two algorithms guarantee each block of flash memory at same level of erase cycles to improve lifetime limitation of NAND based storage.

7.2 ECC

ECC (Error Correction Code): Enhanced configurable BCH ECC engine. Terabit 1.8'' Micro SATA SSD implements the BCH ECC Algorithm, which is one of the most powerful ECC algorithms in the industry. This algorithm can correct up to 12 random bit errors in each 512 bytes.

7.3 MTBF

Mean time between failures (MTBFs) for the SSD can be predicted based on the component reliability data using the methods referenced in the Telcordia SR-332 reliability prediction procedures for electronic equipment, the prediction result for this SSD is more than 2,000,000 hours.

7.4 Bad-block Management

Terabit implements an efficient bad block management algorithm into the SSD to detect factory produced bad blocks as well as those that develop over the lifetime of the device. This process is completely transparent to the user through the use of S.M.A.R.T. command tools, i.e., the user will not be aware of the existence of the bad blocks during operation.

7.5 S.M.A.R.T Function

S.M.A.R.T stands for Self-Monitoring, Analysis and Reporting Technology. This technology enables the PC to predict the future failure of hard disk drives. Through the S.M.A.R.T. system, Terabit 1.8'' Micro SATA SSD incorporates a suite of advanced diagnostics that monitor the internal operation of the drive and provide an early warning for many types of potential problems. When a potential problem is detected, the SSD can be repaired or replaced before any data is lost or damaged.

7.6 TRIM Function

Terabit Solid State Drive equips built-in TRIM function, it locates and marks the useless data, and help GC function to collect and clean, which keeps the system in a high performance status even after long-term using.

7.7 Secure Erase

Terabit 1.8'' Micro SATA SSD supports secure erase function by software, which can erase all data in fast speed and the erased data could not be recovered. Terabit offers several erase commands to meet military standards. These ATA commands have been designed to remove data under certain pattern and with specified activities, and they shall be triggered by sending ATA Commands via software.

Terabit supports ATA Standards including below:

1) AFFSI 5020
2) DoD 5220.22-M
3) USA Navy NAVSO P-5239-26
4) NSA Manual 130-2
5) USA-Army 380-19
6) NISPOMSUP Chap 8, Sect. 8-501
7) NSA/CSS 9-12
8) AFSSI 8580

* For each product only one standard could be selected and no modifications will be supported.

10. Thermal Sensor

Thermal monitors are devices for measuring temperature, and can be found in SSDs in order to issue warnings when SSDs go beyond a certain temperature. The higher temperature the thermal monitor detects, the more power the SSD consumes, causing the SSD to get aging quickly. Hence, the processing speed of a SSD should be under control to prevent temperature from exceeding a certain range. Meanwhile, the SSD can achieve power savings.
